PROFESSIONAL SUMMARY

Benjamin Asumadu is a motivated Individual with 5+ years of experience building user-centric web and mobile applications as a freelance developer. Proven ability to deliver innovative solutions with office tasks and programming, has helped him to become excellent at problem-solving.

WORK EXPERIENCE

PYTHON

Invisible Technologies (Microsoft Question and Answer(QnA) pairs, Microsoft benchmarking Python Project, Microsoft Multi-task Language Understanding)

Invisible Technologies (Cohere - Orochi Python Project)

(June - September 2024)

AI data trainer and operator assistant

- Developed coding challenges that caused the AI to generate incorrect or inappropriate responses. These examples were then used to train the AI using Python, helping it to learn from its mistakes and improve its ability to respond accurately.
- Used Markdown and LaTeX in prompt engineering, response curation, and annotation.
- Discovered weaknesses in Large Language Models on concepts such as DSA(eg, Binary Tree prompts, DFS), Complex Regex selections, Matrices, grid rotations, and ASCII art, which LLMs had difficulties solving.
- Developed robust code with positive tests, negative tests, and edge cases.
- Submitted 20 to 30 tasks a week, which had gone through quality control checks, until project completion in August 2024.
- Tasks included board game logic, Sorting Algorithms, Isograms, ASCII art, approximate food analysis calculations, probability, and permutations etc.
- Followed strict protocols on tasks such as no use of third-party libraries, no external LLM use, etc.

(February - April 2025)

Invisible Technologies
AI video annotation and labeling (RLHF annotation tasks)

- Evaluated AI generated videos against prescribed quality guidelines
- labeled outputs on a quantitative rating scale to support model training and QA alignment.
- Identified and flagged inconsistencies in generated video content including flying artifacts, prompt misalignment, and visual quality issues, ensuring feedback met project accuracy standards. Reviewed over 50 videos a day (less than 20 seconds videos) at standard completion rate and good QA scores.
- I partook in meetings and contributed with fellow annotators the issues that we met during the annotation, especially with ambiguity.

Thrive uk (g_tree scraper project) (November 2024 - January 2025)
Software Developer

- Built a software to scrape job ads from allowed URLs
- Automated filtering of the most recent job posts
- Handled credential persistence to ensure sustainability in automation
- Generated Excel sheets and CSVs to hold scraped data in accordance with pagination

-

JAVASCRIPT

UnityElites group (ue-commerce project)
Software developer - React Native

(2022 - 2023)

Project tools (Expo, Firebase, Github, Paystack)

- Developed an e-commerce mobile app operational on IOS, Android, and Web.
- Created a user login platform and integrated Firebase authentication
- Used Regex to help optimize search based on inputs
- Implemented Paystack to handle payments
- Implemented Firebase to store client Information and history
- Implemented Redux, for state management
- Memoisation and Callbacks to handle time complexity
- Created read-only API endpoints to feed local landmarks and places
- Integrated an e-mail receipt system for completed transactions
- Features include order tracking, history, checkout process, customer account, search filtering, customer support, etc.

UnityElites group (ue-pasco project)
Software developer - React Js
Project tools (Telegram bot API, Github, myfolder.space resources)

- Created a free access past questions website for the UnityElites group under the ue-pasco project.
- Created an API endpoint to get past questions from a third-party source.
- Implemented a user-focused UI/UX frontend experience, that made students prefer using our platform.

- Attained a huge amount of user traffic, from universities such as the University of Ghana, where students complained of difficulty in accessing the schools provided inventories.
- Integrated the app into a telegram bot, which helped grow the project's Telegram community
- Made the software accessible on both mobile and web devices

FREELANCE PROJECTS

TALA HQ - UK (Frontend Developer Contract) (April 2026 - June)

- Built the TALA UI, which is a system for the creative industry and based in the UK, to help users with project management and collaboration.

Beautiful Home Decor (Software Developer Contract) (December 2025 - May 2026)

- Built and managed the Beautiful Home Decor website.
- Built managed a Tile Calculator for making estimates for tile wares for

Hawalina Ventures (Fullstack Project) (April 2026)

- Collaborated on a Fullstack project, and worked on the Affiliate management feature

(2023)

- **PENSA-LEGON (Laravel / PHP)**
  Built backend to handle user registertation, permissions and API logic for PENSA-LEGON (Pentecost Students Association - Legon

(2021)

- NASA Consult (Procedural PHP):
  Collaborated to build a booking and registration system for a travel and tours agency

(2021)

- Healthfirst Consult (HTML, CSS, JS)
  Developed a system to register trainees for IELTS and to showcase their various services

(2021)

- Lf's effect (HTML, CSS, JS)
  Built an e-commerce website for a salon with a booking system

Finance Roles

Financial Advisor (Old Mutual Assurance Company) (2025)

- Provided financial insight on insurance policies
- Assessed clients' state of need to find the best policy products to register
- Advised clients on insurance processes, products, and registration

- Assisted clients with credential checks and the provision of risk information
- Managed client documents on the company's platform and performed CRUD operations
- Assisted clients with claim processes
- Gave a presentation on various insurance policy products

National Service
(2023 -2024)

Council For Scientific And Industrial Research - Food Research Institute (CSIR - FRI)

- Performed lab tests to determine protein content
- Performed lab tests to determine nitrogen content
- Prepared various concentrations of chemicals such as 40% NaOH, 1% Boric acid, and Methyl red.
- Performed moisture analysis on food samples
- Trained and assisted Interns and graduate students in various food analyses
- Partook in surveys and sensory tests for data collection and research purposes
- Attended various food trainings and seminars, relating to food analysis

INTERNSHIPS

University of Ghana Computing Systems (UGCS): (2020)

Built a file handling and folder navigation system (PHP, JS).

- Built a data-collection system to take credentials from users into a database (PHP, JS)

Atomic Energy (2019)

- I worked with Excel and Spreadsheets to store data
- I worked with Microsoft documents and Office apps
- I partook in the scoring of grades for hosted training programmes

TRAINING

- Invisible Technologies - Cohere (Data annotation)
- Invisible Technologies - Chimera (Markdown, Latex, Katex were used for data annotation)
- University of Ghana Computing Systems (UGCS) (React and PHP projects)
- Udacity (Data structures and algorithms)
- Sololearn
- React, Django, Iconic
- CodeWars over (250 points completed)
- Leet code
- W3schools (HTML, CSS, JS, PYTHON, PHP)

EDUCATION

- Responsive Web Development Certification (2026)
- University of Ghana, Legon (2019-2023)
- University of Ghana Computing Systems (UGCS) (Attachment - Full stack projects)

- Bachelor of Science in Psychology (First Degree)
  Coursework Included:
- Cognitive Psychology:
  Why it matters?
  The advancement of chat-based AI depends solely on cognition, which studies the human thought process (Cognitive Psychology).
- Descriptive and Inferential Statistics:
  Why it matters?
  The course involves describing data, representing data, calculations, and making inferences based on the data described.
- Presbyterian Boys Secondary School (PRESEC-Legon) (2016-2019)
  West African Senior Secondary School Certificate Examination (WASSCE) (3rd April 2018)
  Coursework Included:
- ICT (Information Communication Technology), Pure Science (Biology, Chemistry, Physics), Math (e-math, core math)

SKILLS

1. Programming Languages and Tools:
   - JavaScript
   - Python
   - PHP
   - PHPMyAdmin
   - Mysql
   - React Native
   - JQuery
   - Expo
   - Vite
   - React JS/JSX/TS/TSX
   - Node.js
   - Figma
   - Laravel
   - Pixelart (Tiny characters used in game development)

2. Technical Writing Skills:
   - Markdown,
   - Latex and Katex
   - Stackedit
   - Google Colab
   - Google Docs
   - Apidog
   - MS Office applications (Excel, PowerPoint, Word, etc).

3. Communities:
   - Slack
   - Discord

    - Codewars (over 300 points)
    - Leetcode
    - GitHub.
4. Web Hosting:
- Hostinger, GoDaddy, GitHub actions (gh pages, CI/CD), Docker, Cloudflare, 000webhostapp, Netlify,
- Email routing, DNS management, SSL.
5. Design: Logo Design and SVG code generation

ACHIEVEMENTS

- My strategy of using perspectives, grids and angles in prompt curation boosted the productivity of the team, since every task demanded creative invention of problems that did not exist previously and AI could not solve.
- Got over 200 tasks pushed to production with a Quality control score of 100% (Invisible Technologies)
- Discovered programming concepts that popular LLMs such as ChatGPT, Gemini, Perplexity, and Claude had difficulties solving. As a team, this helped us get most LLMs to the quality response they give today.
- Received positive feedback from students on the UE past questions website, as it was compared to the schools library resource.
- Received significant traffic that helped grow the UE telegram community through the UE past questions app integration with the Telegram app bot API.
